Profile

Software engineer with 5+ years of experience designing, building, and supporting backend systems using C#, .NET, SQL, and Microsoft Azure. Experienced in RESTful APIs, microservices, CI/CD, and production support for high-traffic applications. Focused on building reliable, maintainable backend services and owning solutions across development, deployment, and production environments.

Work Experience

Software Engineer

Hexaware Technologies

01/2026 – 05/2026

- Played a key role in migrating a production microservices platform to a new Azure tenant, rebuilding workload infrastructure and standardizing development, staging, and production environments.
- Provisioned and configured Azure resources including Azure Container Apps, Azure App Service, Azure Functions, Key Vault integrations, managed identities, and environment-specific application settings.
- Built and refined Azure DevOps CI/CD pipelines to support containerized deployments and consistent promotion of services across environments.
- Supported migration of workloads from Azure App Service and Azure Functions to Azure Container Apps, resolving deployment, configuration, networking, and connectivity issues.
- Used Application Insights and Azure Monitor to investigate runtime failures, analyze logs and metrics, and validate application health after deployment.

Software Engineer

Figo Pet Insurance

03/2023 – 01/2026

- Designed and developed C#/.NET APIs and microservices while contributing to the migration of a legacy application into a distributed microservices architecture.
- Improved application performance by 50%+, reducing latency by hundreds of milliseconds through backend enhancements and system optimizations.
- Built asynchronous processing workflows using Azure Service Bus and Azure Functions to improve reliability and decouple backend services.
- Participated in an engineering on-call rotation supporting production services, triaging critical incidents, investigating root causes, and coordinating service restoration.

Junior Software Engineer

Figo Pet Insurance

02/2022 – 03/2023

- Developed and enhanced an internal administrative tool used by customer service teams to manage customer, pet, and policy data.
- Implemented full-stack features using C# (.NET) and React, improving usability and reducing manual data reconciliation between systems.
- Leveraged Azure Service Bus and Azure Functions to improve asynchronous processing and system performance.

Skills

– LANGUAGES & FRAMEWORKS

C# .NET SQL React

– BACKEND & ARCHITECTURE

RESTful APIs Microservices Azure Service Bus Redis SQL Server

– CLOUD & DEVOPS

Microsoft Azure Azure DevOps CI/CD Azure Container Apps Azure App Service Azure Functions

Key Vault

– OPERATIONS & MONITORING

Application Insights Azure Monitor Datadog Production Support

Projects

Cosmo - Local AI Gateway

2026 – Present

C# · .NET · MediatR · Ollama · GitHub Actions

- Developing a model-agnostic .NET API for local and cloud LLM orchestration, using layered architecture, MediatR, provider abstractions, and application-owned conversation/context management.
- Implemented automated build and test validation with GitHub Actions, alongside modular infrastructure and application boundaries designed to support additional model providers and future deployment options.

Portfolio Website - lucassproat.com

2026 – Present

React · Vercel · GitHub Actions

- Built and deployed a production portfolio application with separate development, preview, and production environments, using GitHub Actions for preview deployments and manual approval before production releases.
- Developed a serverless contact workflow with server-side configuration and secrets, Cloudflare Turnstile validation, Resend integration, input protections, and automated endpoint testing.

Education

Computer Science | Bachelor's Degree

DePaul University

09/2017 – 11/2021 Chicago, IL

Internships

Data Science Intern

XSELL Technologies

06/2021 – 08/2021

- Built data processing and visualization pipelines in Python to convert structured CSV data into directed graphs
- Independently scoped, planned, and delivered a full project lifecycle within a 10-week internship

Software Engineer Intern

ArkusNexus

06/2019 – 08/2019

- Diagnosed and resolved bugs in web and mobile applications, improving stability and user experience
- Implemented code changes based on user stories and QA-reported issues within an Agile development workflow
